

Notes- Rock Cycle

The Rock Cycle

- The rock cycle is a _____ that shows how rocks _____ from one form to another over time.

Igneous rocks can:

Get _____ and then _____ into sedimentary rocks.

Move _____ and undergo high _____ and _____ and change into metamorphic rocks.

_____ - _____ then cool and harden again and become a _____ igneous rock.

Sedimentary rocks can:

Get weathered and then compacted into _____ sedimentary rocks.

Move underground and undergo high heat and pressure and _____ into metamorphic rocks.

Melt then cool and harden and become an _____ rock.

Metamorphic rocks can:

Move to the _____, get weathered and then compacted into sedimentary rocks.

Melt then _____ and harden and become an igneous rock.

Draw and Label a diagram of the Rock Cycle
